Flow Sensor SS.20.261

The cost-effective alternative in pressurized systems up to 10 bars

- Direct measurement of the standard flow rate up to 90 m/s without additional pressure or temperature compensation or calculations
- High precision calibration incl. ISO calibration protocol (optional)
- Overpressure up to 10 bar

D-EN-SS20-261-20190403

Flow Sensor SS.20.261

The cost-effective alternative in pressurized systems up to 10 bars

Features
- Direct measurement of the standard flow velocity up to 90 m/s without additional pressure or temperature compensations or calculations
- Maintenance-free without moving parts
- Integrated temperature measurement
- High precision calibration with ISO calibration certificate (optional)
- Compact design and easy installation
- Integrated sensor “Blow Out” protection (In case accidental loosening of the compression fitting occurs under pressure)
- Suitable for tube diameters from DN 25 to DN 600
- LED status display
- Overpressure up to 10 bars

The accurate volume flow measurement in compressed-air systems is used to
- save energy and increase the energy efficiency by a continuous leakage detection and an optimum compressor control
- calculation of compressed-air consumption and contracting
- system monitoring to avoid production downtimes and to guarantee a cost-effective and status-oriented maintenance

Precision?
We can provide you written proof!
On request, the high precision calibrated sensor can be delivered with an ISO calibration certificate which documents the accuracy and the reproducibility. The measurements are conducted in reference wind channels which are especially designed for this purpose – of course the calibration can be renewed at any time.

Application examples
- Packing machines
- Injection moulding machines
- Textile machines
- Pneumatic conveyance system
- Surface coating
- Installation of compressed-air tools
- Production of insulating material

Volume flow measurement made easy - One measurement instead of many measurements
The thermal flow sensor SS 20.261 works by the hot wire principle of a thermal anemometer. That's why the application in systems with overpressure is very simple since only the temperature and pressure values must be measured and calculated. The sensor measures the correct flow velocity independently of the pressure (up to 10 bars). The linear output signals of flow and temperature are individual current signals 4 ... 20 mA – from 0 m/s to 40, 60 or 90 m/s. The measured value is output as standard velocity which can be converted easily in the volume flow of the used tube diameter (see table on the last page).

Measuring other gases?
For a lot of industrial areas, the detection of the different gas quantities is interesting since the cost minimization is not only important for the compressed air.
In many areas, the consumption has to be controlled and leakages must be detected, for example:
- production of electronic components
- application of shielding gases
- drying processes with inert gases and others

Flow Sensor SS.20.261

The cost-effective alternative in pressurized systems up to 10 bars

Installing, connecting, measuring
The optimum position in the tube and the selection of the best measuring point are very important for the correct installation of the "Plug and Play" sensor. The sensor is placed in a tube section with a uniform flow without turbulences. Therefore the run-in distance must correspond to at least 10 times the tube diameter and the run-out distances to 5 times the tube diameter. This will avoid the influence of valves, tube bends etc. The installation itself is very easy: Screw the sensor on the weld-in sleeve – adjust the sensor tip in the center of the tube – tighten the compression fitting – connect the wires – ready.

Intelligent technology
Due to the chamber head technology, the sensor is suitable for a very large velocity range from 0.2 m/s to 90 m/s. The sensor is fitted into tubes with diameters between DN 25 and DN 600 and is able to precisely detect volume flows of up to 74,000 m^3/h. Even the smallest volume flows such as leakages can be precisely measured during the idle periods of the system.

D-EN-SS20-261-20190403

Flow Sensor SS 20.261

Durchflussmesser / Strömungssensor nach dem kalorimetrischen Prinzip (Anemometer)

The cost-effective alternative in pressurized systems up to 10 bars

Eveything in view
The LED display is used for the function monitoring and for a quick error analysis on site.

„All inclusive“
The flow sensor SS 20.261 is delivered with a compression fitting made of brass which allows an easy, safe and quick installation.

LED wall display (accessories)
For local indication an LED wall display is available.
The advantages:

- Display in m/s or m³/h
- Programmable output signal
- Two programmable relay outputs
- Voltage supply 85 – 230 V AC or 24 V DC
- Voltage supply of the connected sensor
- Separate version with sum function

Flow Sensor SS20.261

Durchflussmesser / Strömungssensor nach dem kalorimetrischen Prinzip (Anemometer)

The cost-effective alternative in pressurized systems up to 10 bars

Technical data	
Measurement value	Standard velocity W_N based on standard conditions T_N = 20 °C and P_N = 1.013.25 hPa temperature of the medium T_m
Medium to be measured	Air, nitrogen, other gases upon request (flammable gases are not allowed)
Measuring range of flow W_N	0 … 40 / 60 / 90 m/s
Smallest measurable flow velocity W_N	0.2 m/s
Measuring accuracy	
Standard W_N 1)	± 5 % of measured value + 0.4 % of measuring range
High precision calibration W_N 1)	± 3 % of measured value + 0.4 % of measuring range
Reproducibility W_N	± 1.5 % of measured value
Response time (t_{90}) W_N	3 s (jump from 0 to 5 m/s)
Temperature gradient	8 K/min at 5 m/s
Pressure dependence	Independent of the pressure of the medium
Temperature measuring range T_m	-20 … + 85 °C
Temperature measuring accuracy T_m.	± 1 K at W_N > 2 m/s
Operating temperature	
Sensor	- 20 … + 85 °C
Electronics	0 … 70 °C

Flow Sensor SS.20.261

The cost-effective alternative in pressurized systems up to 10 bars

Technical data	
Material	
Housing	PBT, glass fiber reinforced
Sensor tube	Stainless steel 1.4571
Sensor element	Ceramics, passivated glass
Connecting cable	PVC
Mounting	Compression fitting made of brass, G½
General data	
Operating pressure	0 … 10 bar
Medium, gas state	Non-condensing (up to 95 % relative humidity)
Output signals	2 x 4 … 20 mA, R_L < 300 Ω, C_L ≤ 10 nF
Maximum cable length	100 m
Display	Green LED: operating state Red LED: Sensor defective
Supply voltage	24 V DC ± 10 %, 60 mA
Stabilization time	Approx. 10 s after switch on
Connection	Permanently connected cable, 4-cores, Length 5 m, with cable and sleeves
Probe length	200 / 350 mm
Mounting tolerance	± 3° to flow direction
Installation position	As disired (except in case of a downward flow W_N < 2 m/s at the same time)
Type of protection	IP 65

Flow Sensor SS.20.261

The cost-effective alternative in pressurized systems up to 10 bars

Order information					
	Descriprion	**ID-No.**			
Basic sensor	Flow sensor SS 20.261; output signal 4 ... 20 mA; 2x overpressure up to 10 bar and compression fitting made of brass; cable length 5 m	526 335-	X	Y	Z
Options					
Sensor length	Sensor length 200 mm, brass G 1/2		1		
	Sensor length 350 mm, brass G 1/2		2		
	Sensor length 200 mm, stainless steel 1.4503		3		
	Sensor length 350 mm, stainless steel 1.4503		4		
Measuring ranges & calibration	Measuring range 0 ... 40 m/s			1	
	Measuring range 0 ... 60 m/s			2	
	Measuring range 0 ... 90 m/s			3	
	Standard calibration				1
	High precision calibration with ISO calibration certificate				2

	Description	**ID-No.**
Accessories	Welding sleeve G½, steel, according to EN 10241, 5 units	524 916
	Welding sleeve G½, stainless steel, EN10241, 2 units	524 882
	LED display MD 10.010 in wall housing to show the volume flow and the flow velocity, 85 ... 250 VAC and sensor power supply	527 320
	LED display MD 10.010 similar to 527 320 but with 24 VDC voltage supply	528 240
	LED display MD 10.015, similar to 527 320 but with an additional sum function and a second measuring input	527 330
	LED display MD 10.015, similar to 527 330 but with 24 V DC voltage supply	528 250
	Assembly kit for pipe assembly suitable for MD 10.010 / 10.015, including pipe clamps and collar for adjustment to the pipe diameter	531 394
	Ball valve	on request
